

System Sanity Checks

System Sanity Checks

Introduction

System sanity checks are essential to ensure that a system is functioning correctly and efficiently. These checks help identify any potential issues before they escalate into significant problems.

Types of Sanity Checks

1. **Basic Functionality Tests**: Verify that the core functionalities of the system are working as expected.
2. **Performance Checks**: Assess the system's performance under various conditions to ensure it meets the required standards.
3. **Error Handling**: Test how the system responds to unexpected inputs or failures.

Conclusion

Regular sanity checks are crucial for maintaining system integrity and performance.
